About us

BRUK SA – 30 years of experience

Manufacturer of BRUK Premium decorative pavers, industrial pavers and concrete products for road construction, as well as precast concrete products for industrial construction and property development. The company has been operating for more than 30 years on the basis of the latest production technologies, quality expectations, market trends and in harmony and respect for the environment.

Providing the best solutions

Concrete pavers are the most popular material for finishing the garden or the area around the house. Why is that? It's due to high durability, rich colour palette and variety of paving shapes. The wide range of choices, combined with unlimited imagination, makes it possible to create aesthetically pleasing as well as original compositions. Smooth or washed pavers, large slabs or classic, smaller blocks, mono-colours or a mix of colours, decorative palisades or traditional edging? For us, it's not a problem - it's a passion to create. Recipients of our products are able to choose paving blocks according to their own tastes, vision or previously prepared designs. Our BRUK Premium range of decorative pavers is constantly being enriched with new designs, giving our customers many possibilities to arrange their surroundings. Customer satisfaction with our products is always our priority. Thanks to our constantly improving modern production lines - the newest line opened in 2020 - we are able to meet the expectations of the most demanding customers.

We are at your service

We constantly ensure professional customer relations. You can benefit from the support of a professional Team for whom the realisation of the expectations of each and every investor is a real pleasure. In addition to accessing high-quality products corresponding to the latest trends, our customers are supported by Landscape Architects who visualise all expectations regarding the planned investment space. A large group of distributors constantly cooperates with BRUK SA and we continue to engage with the best paving block dealers on the southern Polish market. The availability of material is a key consideration for us. Our delivery trucks equipped with an unloading crane are always operational and ready for use.

We are defined by quality

All our products comply with European standards: PN-EN 1338, PN-EN 1339, PN-EN 1340, PN-EN 13198. The products we offer have been verified by quality tests, updated on an ongoing basis by the AGH University of Science and Technology in Kraków, and confirmed with relevant certificates.

Modern

Unique and modern

The modern form and shape of these paving blocks makes it possible to create unique compositions, emphasising the qualities of the surrounding area. The different surface textures, finished with fine micro-chamfering, create combinations that give a unique and modern character to many a driveway or terrace.

Eko Bruk

Eco style

EKO BRUK paving blocks were developed to create decorative surfaces in public and private spaces. They meet building standards for both pedestrian and light vehicular traffic routes. Thanks to the use of spacers, which are invisible after grouting, the surface laid with EKO BRUK paving blocks becomes biologically active, i.e. permeable to rainwater. The use of different types of infill in the spaces between the blocks makes it possible to create decorative or grassy surfaces.

Neo

Modern Elegant Original

Inspiration comes from nature, culture and fashion. They are the ones that trigger our desire to create. The NEO paver allows anyone to create any arrangement and realise their vision. The simple groutless finish and the three elements that make up the system result in paving with a timeless look. It is ideal for a variety of styles from classic to modern.

Ligio

Versatility in a large format

The consistent sizes of the LIGIO pavers are ideal when pavements are subjected to increased wear and tear with the need for a large format. It is an ideal set of three pavers that look great in urban spaces, replacing classic, outdated and time-worn materials with modern and unusual colours and durability.

Akropol

Classic and elegant surface

A distinguishing feature of the AKROPOL paving blocks is their fine, wavy texture, while the micro-chamfered finish definitely enhances the comfort of use. Thanks to the original design, AKROPOL paving blocks will decorate any property. The paving looks great on garden paths, terraces or driveways, delighting many a passer-by.

Grenada

Neat, durable finish

GRENADA paving blocks are reminiscent of old cobblestones thanks to their irregular surface. The paving works well as a neat and durable finish for urban pavements as well as in large car park areas. The thickness of the paving allows it to be used by heavy vehicles. The multiplicity of shapes and dimensions of the pavers offers a wide range of possibilities for creating various designs.

Nostalit

Natural, traditional style

The shape of NOSTALIT paving blocks brings to mind the aesthetics of oldmarket squares paved with granite blocks. A distinctive feature of the paving is the rounded edges between the front and side surfaces. The smooth surface of the paver and the closely fitting sides give it an interesting character.

Precast products

Specialised precast concrete products for the construction industry

We will fulfil any order, regardless of the size and tonnage of the precast product. Our customers can count on our support at every stage of their investment project.

Experience

We are one of the leading, respected Polish manufacturers of precast concrete products. Since 2007, based on the latest technologies, we have been supplying the domestic and foreign markets with the highest-quality concrete elements for residential and industrial construction. Confirmation of the high quality of our products and our professional approach can be found in the certificates we have obtained, as well as in our ever-growing group of satisfied customers.

REDUCED LEAD TIMES FOR YOUR INVESTMENT PROJECT

The use of precast products minimises additional labour on site, eliminates the need for formwork and reduces the storage of materials on site.

HIGH PRECISION OF MANUFACTURED PARTS

The use of modern technology guarantees a smooth surface of the concrete element.

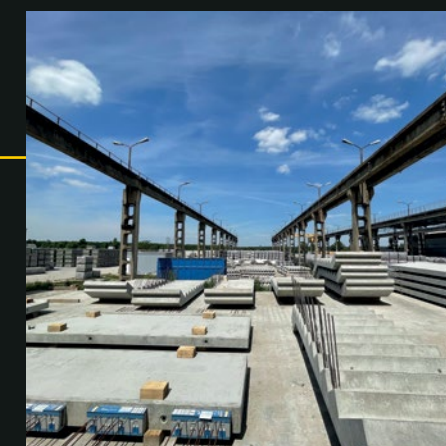

REDUCED INVESTMENT COSTS

The use of precast elements speeds up construction, significantly reduces labour costs and guarantees high quality.

We adapt the precast elements to the customer's needs, taking into account different systems:

- handrail fixings
- drains
- vibration damping

and any other in accordance with the customer's guidelines.

Road and track slabs

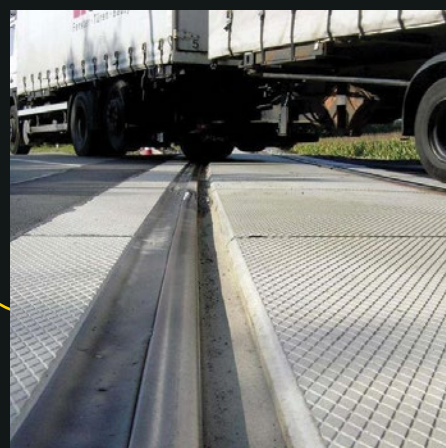

Precast tramway slabs are manufactured as:

- track slabs - designed to accommodate rails
- intertracks - to be used in the intertrack

Precast reinforced concrete road and track slabs for use in integrated track and road areas are manufactured as JB-T type slabs and are suitable for tracks with a track gauge of 1435 mm and as JB-W type slabs suitable for tracks with a track gauge of 1000 mm. All slabs are available in thicknesses of 40 cm, 35 cm and 30 cm. They are produced in four basic lengths: 1000 mm, 1500 mm, 3000 mm and 4000 mm.

For both track and intertrack slabs, there are special slabs (cable, drainage, with integrated cast iron manhole).

Trapezoidal slabs of 0.67 m and 1.0 m in length are designed for installation on curves with a radius of $R < 60$ m.

Depending on the specific project, combinations of the above-mentioned standard slab types are possible, as well as the manufacture of each slab in a different non-standard length.

Road and track slabs are finished in a way that provides the right surface roughness.

In special cases, it is possible to use other dies to give the slab surface any texture according to the order specifications: e.g. rhombus, cobblestone, etc.

Our products

industrial construction

- foundations
- retaining walls
- platform walls
- spot footings
- interlocking 'lego' blocks
- road slabs
- slope steps
- beams
- walls

residential, office buildings

- straight and winder flights of stairs
 - flights of stairs with one or two landings
- positive and negative space flights of stairs
 - landings
- fire protection walls
 - balcony slabs
 - lift shafts
 - beams
- walls, walls with door and window openings

We guarantee that all our products are made with the utmost care, according to current standards, using the latest materials and technology.

Details of the guarantee and conditions of sale can be found at bruksa.pl

1. The paving blocks and concrete products manufactured at our plant are construction products. In accordance with the Construction Products of 16 April 2004, which meets the requirements of Polish and European standards: PN-EN1338; PNEN1339; PN-EN1340.
2. A Declaration of Performance is issued for each product and is available on request.
3. All products delivered to the customer feature a label confirming the parameters of the ordered materials.
4. The declared technical and performance parameters indicated on the label and in the Declaration of Performance in each case are achieved by the concrete products 28 days after the date of manufacture.
5. De-icing agents and surfactants should be used at the appropriate concentrations and after prior consultation with the manufacturer.
6. The use of the products should be in accordance with the manufacturer's recommendations found on the product label. Assembly and installation of the material should be carried out in accordance with the manufacturer's installation instructions. Use of the products for purposes other than those specified by the manufacturer is forbidden; in addition, failure to follow the installation instructions may result in damage to the material and the loss of warranty and guarantee rights.

We manufacture non-standard precast elements according to the investor's individual design

The following product features comply with the aforementioned European standards and are considered to be insignificant and do not constitute a product defect within the meaning of the Civil Code:

Lime scale deposits (efflorescence)

are formed on the surface of the pavers as a result of the physicochemical processes occurring during the maturation of concrete. This does not compromise the performance of the pavers and light lime deposits disappear after a maximum of three years. There are products available on the market to remove efflorescence from pavers that have already been laid.

Hairline micro-cracks

Hairline micro-cracks are unnoticeable on dry products, but visible when the paver dries.

Flash

the top edge of the products may exhibit so called flash, which results from the normal use of the mould and punches. It starts to crumble away while the paving is laid and is gone completely after a short period of use.

Minor mechanical damage

cracks, chipping, scratches, surface abrasions may occur during transport and packing, unloading and laying of the paving blocks. According to studies, up to 2 % of such damage is permissible during loading and unloading with cranes, which needs to be taken into account when ordering, and we are not responsible for damage caused during installation

Difference in paving shades

(even of the same production batch) do not depend on the manufacturer and are influenced by the following factors: the quality of the pigments, the colour of the cement, the colour of the aggregates, the temperature, the conditions in which the concrete matures and the use of the paving blocks.

Pores

small indentations determined by the production process.
